

Additional informational on item 25-2220

SCADA System is used by Public Works & Stormwater Departments.

The SCADA system allows for the monitoring of water quality using sensors to measure flow, level, & concentration. With this information automated or manual controls adjustments can be made to pumps, motors, valves and alerts can be sent out at different settings to notify Operators 24/7.

Public Works

- 3 Wastewater treatment plants
- 6 Drinking water systems
- 8 Sanitary Lift Stations

Stormwater

- 5 operational facilities
- monitoring various other sites
